

The Building is Really Coming Alive!

As interior suite finishing progresses, we are also focused on transitioning from temporary to permanent power.

What does that mean in relation to construction work? Once permanent power is brought into the building, some major works begin. The elevator is brought online and becomes the primary mode of transporting materials within the building; as this is completed, the hoist can be removed.

The elevator is just one of many building systems to be commissioned, programmed, tested and finally connected to the building automation system (BAS). The BAS centrally monitors all equipment - sensors and alarms, lighting, transformer, air flow and temperature, and water just to name a few; ensuring that they function as programmed, perform optimally and efficiently or alternatively, identifies a deficiency, and can send notifications to the system administrator. Comprehensive monitoring by the BAS and system administrator is part of better building and contributes to improved management and maintenance of condos and commercial buildings alike.

Upcoming Milestones

- Balcony Railing Completion
- Covered Walkway Removal
- Hoist Removal
- Condo Care Start

Construction Work Hours

- M-F: 7am to 7pm
- Sat: 9am to 7pm
- Sun/Holidays: No Work
